PAPER: 84

TITLE: Development of a Cost-Effective Shooting Simulator Using Laser Pointer

AUTHORS: Aryuanto Soetedjo, Eko Nurcahyo and Yusuf Ismail Nakhoda

While it offers a low cost system, the method of using the system to identify laser-pointed location has not explained (why does it need 10 concentric circular pattern? how many columns and rows are used? How big is the target screen?). Elaboration on the implementation and experimental results are needed since it shall show its effectiveness with respect to surrounding light disturbance.

It needs a careful English writing. In the abstract, it is found that the choice of words may mislead, e.g. "the shooter shoots the laser pointer into the target screen". It should be "the shooter aims the laser pointer ..."
